Detection Focus

✓ Carbon Dioxide (CO₂)

Indoor CO₂ level is a universal accepted parameter for the condition of indoor ventilation and air quality.

A time period can be preset from 1 to 24 hours, e.g. 5 hours, then the monitor can display CO₂ average level during this period, which provides an objective and true data for the measurement of the air quality in a certain space.

- ◆ Non-dispersive infrared (NDIR) CO₂ sensor with more than 10-year lifetime
- ◆ ABC self-calibration technology guarantees reliable CO₂ measurement
- ◆ CO₂ range: 0~2000ppm/0~5000ppm optional
- ◆ Rapid response, high stability and consistency

✓ **Temperature and humidity**

Combined digital temperature and humidity sensor with high accuracy and stability. It also has compensation to CO₂ and air quality which makes the measurements more accurate by minimizing environmental effects.

Typical Applications

- ◆ Building management for office areas and residential
- ◆ Ventilation control system
