## **Description**

MIPEX-05 is intended for automatic continuous measurement of the concentration of hydrocarbons in atmosphere of hazardous areas.

Sensor operating principle is based on NDIR technology, i.e. on selective absorption of infrared radiation by gas molecules.

Differential dual wavelength method allows eliminating of water vapor, optical elements contamination and other non-selective hindrances influence.

Communication interface – UART.

## **Application**

MIPEX-05 sensor is intended for using in a hazardous areas. Sensor is used as a OEM component for portable and fixed gas detectors for industrial safety.

### Handling precautions

Maximum allowable pressure on the central part of sensor reflecting cover and on side surface sensor - 4 N.

Sensor is not intended to measure carbon dioxide contained in fluids.

Keep sensor out of contact with aggressive substances e.g. acidic environments, which can react with metals, as well as solvents, which may affect polymeric materials.

Diffusion holes of sensor should be protected against ingress of dust and sprayed materials.

Covering diffusion holes of sensor increases its response time.

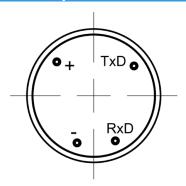

Sensor must be mounted using sockets only, as soldering the pins may damage sensor.

There is no risk of pollution and negative impact on human health. Sensor does not contain any harmful substances that may be released during its normal operation.
